## AMENDMENTS TO THE CLAIMS

- 13
- 1. (Currently Amended) In an electronic device having a database of records of different category types categories, a method of displaying information comprising the steps of:
- a) receiving an indication from a user that selects a first category type of said different category types;
- b) indexing a <u>sort</u> table with said first category type to obtain a first sort field for said first category type, said <u>sort</u> table associating each category type of said different categories with its own sort field, wherein a sort field for each category type is under user control and wherein said first category type has a sort field different from that of another category type;
- c) sorting records of said first category type into an order that is determined according to said first sort field to produce a first list; and
- d) displaying a portion of said records in said order on a display screen of said electronic device, wherein said portion displayed is formatted automatically with information from said sort field on the left-hand side of said display screen as viewed by said user, wherein by selecting said sort field said user controls said order in which said records are displayed;
- e) displaying a second list comprising sort instructions stored in said sort table, wherein said second list comprises a sort field for each of said different categories including said first sort field for said first category type;
  - f) receiving an indication from said user that selects said first sort field;
- g) in response to step f), displaying a third list comprising sort fields that can be used instead of said first sort field, wherein said user can replace said first sort field with a sort field selected from said third list.

2

2. (Currently Amended) A method as described in Claim 1 and further comprising the steps of:

receiving another indication from said user that selects a second category type of said different category types;

indexing said <u>sort</u> table with said second category type to obtain a second sort field for said second category type;

sorting records of said second category type by said second sort field obtained to produce a <u>fourth</u> second list; and

displaying in list order a portion of said <u>fourth</u> second list on said display screen.

- 3. (Original) A method as described in Claim 1 wherein said electronic device is a palm-sized computer system.
- 4. (Original) A method as described in Claim 1 wherein said electronic device is a wireless telephone.
- 5. (Original) A method as described in Claim 1 wherein said database is a database of contact information comprising records each having fields defining a name, an address and a telephone number.
  - 6. (Canceled).
- 7. (Original) A method as described in Claim 1 wherein said step a) comprises the step of said user depressing a designated button on said electronic device.

- 8. (Currently Amended) In <u>a</u> hand-held personal digital assistant having an address database of contact records of different <u>category types</u> eategories, a method of displaying information comprising the steps of:
- a) receiving an indication from a user that selects a first category type of said different category types;
- b) indexing a <u>sort</u> table with said first category type to obtain a first sort field for said first category type, said <u>sort</u> table associating each category type of said different categories with its own sort field, wherein a sort field for each category type is under user control and wherein said first category type has a sort field different from that of another category type;
- c) sorting contact records of said first category type into an order that is determined according to said first sort field to produce a first list; and
- d) displaying a portion of said contact records in said order on a display screen of said <u>hand-held personal digital assistant electronic device</u>, wherein said portion displayed is formatted automatically with information from said sort field on the left-hand side of said display screen as viewed by said user, wherein by selecting said sort field said user controls said order in which said contact records are displayed;
- e) displaying a second list comprising sort instructions stored in said sort table, wherein said second list comprises a sort field for each of said different categories including said first sort field for said first category type;
  - f) receiving an indication from said user that selects said first sort field;
- g) in response to step f), displaying a third list comprising sort fields that can be used instead of said first sort field, wherein said user can replace said first sort field with a sort field selected from said third list.

9. (Currently Amended) A method as described in Claim 8 and further comprising the steps of:

receiving another indication from said user that selects a second category type of said different category types;

indexing said <u>sort</u> table with said second category type to obtain a second sort field for said second category type;

sorting contact records of said second category type by said second sort field obtained to produce a <u>fourth second</u> list; and

displaying in list order a portion of said <u>fourth</u> second list on said display screen.

- 10. (Currently Amended) A method as described in Claim 8 wherein said <u>hand-held personal digital assistant electronic device</u> is a palm-sized computer system.
- 11. (Currently Amended) A method as described in Claim 8 wherein said <u>hand-held personal digital assistant electronic device</u> is a wireless telephone.
- 12. (Original) A method as described in Claim 8 wherein said address database comprises contact records each having fields defining a name, an address and a telephone number.
  - 13. (Canceled).

- 14. (Currently Amended) A method as described in Claim 8 wherein said step a) comprises the step of said user depressing a designated button on said <a href="https://hand-held.personal digital assistant electronic device">hand-held personal digital assistant electronic device</a>.
- 15. (Currently Amended) An electronic device comprising a processor coupled to a bus, a display coupled to said bus and a memory coupled to said bus, said memory having a database of records of different category types categories and instructions implementing a method of displaying information comprising the steps of:
- a) receiving an indication from a user that selects a first category type of said different category types;
- b) indexing a <u>sort</u> table with said first category type to obtain a first sort field for said first category type, said <u>sort</u> table associating each category type of said different categories with its own sort field, wherein a sort field for each category type is under user control and wherein said first category type has a sort field different from that of another category type;
- c) sorting contact records of said first category type into an order that is determined according to said first sort field to produce a first list; and
- d) displaying a portion of said contact records in said order on said display screen, wherein said portion displayed is formatted automatically with information from said sort field on the left-hand side of said display screen as viewed by said user, wherein by selecting said sort field said user controls said order in which said records are displayed;
- e) displaying a second list comprising sort instructions stored in said sort table, wherein said second list comprises a sort field for each of said different categories including said first sort field for said first category type;

01

f) receiving an indication from said user that selects said first sort field;

g) in response to step f), displaying a third list comprising sort fields that can be used instead of said first sort field, wherein said user can replace said first sort field with a sort field selected from said third list.

16. (Currently Amended) A computer system An electronic device as described in Claim 15 wherein said method further comprises the steps of:

receiving another indication from said user that selects a second category type of said different category types;

indexing said <u>sort</u> table with said second category type to obtain a second sort field for said second category type;

sorting records of said second category type by said second sort field obtained to produce a <u>fourth second</u> list; and

displaying in list order a portion of said <u>fourth</u> <del>second</del> list on said display screen.

- 17. (Currently Amended) A computer system An electronic device as described in Claim 15 wherein said electronic device is a palm-sized computer system.
- 18. (Currently Amended) A computer system An electronic device as described in Claim 15 wherein said electronic device is a wireless telephone.
- 19. (Currently Amended) A computer system An electronic device as described in Claim 15 wherein said database is a database of contact information

PALM-3532/ACM/WAZ Examiner: CHEN, C.

comprising records each having fields defining a name, an address and a telephone number.

- 20. (Canceled).
- 21. (Currently Amended) A-computer system An electronic device as described in Claim 15 wherein said step a) of said method comprises the step of said user depressing a designated button on said electronic device.
